

C++ Developers - Academic high achievers

Our client is looking for C++ developers. They are an established and successful global boutique with big ideas about growth and substantial budgets for technology and salaries. They are looking for C++ developers to produce complex real-time applications and are keen to engage candidates with strong academic backgrounds.

I am keen to hear from C++ developers across all industries where they can demonstrate the following characteristics:

- high academic achievement (eg First class honours degrees, IT/Maths)
- experience with highly mathematical algorithmic / quantitative development
- develops robust, real-time applications
- has a great memory for code (STLs, syntax etc)
- loves puzzles and problem solving
- enjoys producing elegant code
- produces applications that handle large volumes of data

Candidates should demonstrate one or more years commercial experience in addition to excellent university results, for example First Class Honours degrees, Masters Degrees and PhD qualifications in Mathematics or IT.

If you have been involved in complex, multi-threaded C++ development projects that have challenged your problem solving skills, and can boast excellent university results, contact me now to learn more about this rare opportunity!
